Consolidated Quick-Answer FAQ for the Chatbot 63

About This Document and Known Gaps

This document contains the text content of the public website https://hiddenmindsolutions.in as read on 20 October 2026. Each section starts with the page title and its source URL so a chatbot can cite where an answer came from. Blog articles are condensed summaries of the full posts; every other page is captured in full detail.

Things the website did not show (not guessed or filled in)

- Homepage FAQ: the site lists five questions, but only the answer to the first one is visible. The answers to the other four are collapsed and were not captured.
- Results numbers on case-study pages (for example '95%' style counters) are animated and appeared as 0 when read. Only numbers written in the body text are included here.
- The MERN Stack Developer job page shows empty 'Responsibilities' and 'Requirements' sections in the readable text, so those lists are not included.
- The Work page says there are 25+ projects, and has a 'See More' option. Fifteen case-study pages that are linked from the site were captured. Any others not linked were not found.
- No pricing figures are published on the site. Pricing is given on request after a discovery call.

Inconsistencies on the website itself

- Office address: the homepage and service pages give the Udaipur office address. The Privacy Policy and Terms of Use list 'Sikar, Rajasthan, India' as the company address and legal jurisdiction.
- Project count: the homepage says '250+' projects completed, while the Work page says '25+ projects across various industries since 2024'.
- The Privacy Policy and Terms pages open with wording about an 'educational platform', which looks like leftover template text.
- The banner at the top of every page links to a different domain (hiddenmindsolutions.com).

Company Overview (Home Page)

Source page: https://hiddenmindsolutions.in/

Hidden Mind Solutions (also written Hidden Minds Solution, abbreviated HMS) is an AI and software development company based in Udaipur, Rajasthan, India. It builds custom software, AI automation, web applications and mobile apps for startups and enterprises in India and worldwide.

Headline and positioning

Website headline: 'AI & Software Development Company in Udaipur'. Tagline: 'Custom software, AI automation, web and mobile apps, built to drive measurable business growth for startups and enterprises in India and worldwide.' Another line on the page: 'We design and deliver tailored solutions that drive real, measurable business growth - fast.'

Banner message: 'Discover how Hidden Minds Solution is transforming brands through innovation, creativity & intelligent design.'

Key numbers shown on the homepage

- 95% - complete customer satisfaction
- 10 days - first measurable results
- 250+ - projects completed
- 50+ - innovation and valuable insight

Service categories listed on the homepage

- Web Development
- Application Development
- AI & Automation Solutions
- Software Development
- Cloud & DevOps Services
- Security & Compliance
- Digital Growth & Marketing

Main service pages

- Web Development - fast, SEO-ready websites and web apps on React, Next.js and Node.js.
- AI & Automation - chatbots, workflow automation and machine learning that cut manual work.
- Software Development - custom business software, SaaS products and integrations.
- Mobile App Development - iOS and Android apps with React Native and Flutter.
- n8n Automation - n8n workflows that connect your CRM, email, chat and AI.
- GoHighLevel - GoHighLevel setup, automations and custom integrations.
- AI Voice Agents - AI calling agents for sales, support and booking.
- WhatsApp Automation - WhatsApp chatbots and automation for sales and support.
- ERPNext Development - ERPNext implementation, customisation and integrations.

Technologies used

Logos and categories on the homepage: GoHighLevel, FastAPI, .NET, Canva, Vapi, ElevenLabs, Framer, Figma, AWS, Webflow, Docker, n8n, React, Express. Technology categories: AI automation (AutoGen, make.com, n8n, Zapier, Python, MCP), frontend, backend, mobile app, AI agent, DevOps, design, database, cloud and testing.

Featured projects on the homepage

- Trading Project (trading)
- HR and Payroll Project (HR and Payroll)
- AI Chat bot Project (Chat Bot)

Calls to action

'Get a Free Consultation', 'View Our Work', 'Call +91 93767 78747', WhatsApp chat, 'Free Quote', and 'Download our deck' (company brochure PDF at https://hiddenmindsolutions.in/downloads/HMS-Company-Brochure.pdf).

Project enquiry form

The homepage has a 'Tell us about your project' form with fields: first name, last name, email, phone number, country, and message. The team replies with next steps and a free consultation.

Web development sub-services shown on this page

Corporate & Product Websites, Web Portals & Dashboards, E-Commerce Development, Landing Pages. The Application Development block on this page shows the same four sub-service lines.

Common working process on every service page

- 01 Discovery call: we learn your goals, users and constraints, then agree on what success looks like.
- 02 Scope & estimate: you get a clear scope, timeline and fixed or monthly pricing before any work starts.
- 03 Build in sprints: short sprints with regular demos, so you see working software early and can steer it.
- 04 Launch & support: we deploy, monitor and keep improving the product after go-live.

Service: Web Development

Source page: https://hiddenmindsolutions.in/services/web-development

Page title: 'Web Development Company in Udaipur'. We design and build fast, SEO-ready websites and web applications for startups and businesses across India and abroad. From marketing sites that generate enquiries to full SaaS platforms, we build on React, Next.js and Node.js and hand over code you own.

What we build

- Business & marketing websites: conversion-focused sites with clean structure, fast load times and technical SEO built in.
- Web applications & SaaS: dashboards, portals and multi-tenant products with secure authentication and APIs.
- E-commerce & booking platforms: online stores, booking engines and payment integrations tailored to your workflow.
- CMS-driven sites: headless CMS setups (such as Strapi) so your team can update content without a developer.
- Performance & SEO audits: Core Web Vitals, crawlability and on-page fixes for sites that are not ranking or converting.
- Maintenance & support: hosting, updates, monitoring and continuous improvement after launch.

How we work

- 01 Discovery call: we learn your goals, users and constraints, then agree on what success looks like.
- 02 Scope & estimate: a clear scope, timeline and fixed or monthly pricing before any work starts.
- 03 Build in sprints: short sprints with regular demos so you see working software early and can steer it.
- 04 Launch & support: we deploy, monitor and keep improving the product after go-live.

FAQs

Q: How much does a website cost?

A: It depends on scope: number of pages, features and integrations. After a short discovery call we send a clear estimate, fixed price or monthly, before you commit.

Q: How long does a typical website take?

A: A marketing website usually takes a few weeks. Larger web applications are delivered in phases so you can launch early and keep improving.

Q: Will my website rank on Google?

A: We build with technical SEO from day one: clean URLs, metadata, structured data, fast performance and mobile-first design. Rankings also depend on content and competition, so we can advise on that too.

Q: Do I own the source code?

A: Yes. You own the code and content we build for you.

Q: Do you work with clients outside Udaipur?

A: Yes. We are based in Udaipur, Rajasthan and work with clients across India and internationally, with remote calls and regular demos.

Service: AI & Automation

Source page: https://hiddenmindsolutions.in/services/ai-automation

Page title: 'AI Automation Company in Udaipur'. We help businesses put AI to work: chatbots and assistants, document and data processing, workflow automation and custom machine learning. We start with a process that costs you time or money today and build automation that measurably reduces it.

What we build

- AI chatbots & assistants: customer support and internal assistants trained on your own documents and data.
- Workflow automation: connect your CRM, messaging, email and internal tools to remove repetitive manual steps.
- Generative AI integration: add LLM-powered features such as summarisation, search and content generation to your product.
- Machine learning & prediction: forecasting, classification and recommendation models built around your data.
- Computer vision: image and video analysis for inspection, counting and verification use cases.
- AI audit & roadmap: a short engagement to find where AI will pay off in your business and what it will take.

How we work

- 01 Discovery call: we learn your goals, users and constraints, then agree on what success looks like.
- 02 Scope & estimate: a clear scope, timeline and fixed or monthly pricing before any work starts.
- 03 Build in sprints: short sprints with regular demos so you see working software early and can steer it.
- 04 Launch & support: we deploy, monitor and keep improving the product after go-live.

FAQs

Q: Where should we start with AI?

A: Pick one repetitive, high-volume process. We map it, estimate the saving and build a small working version first so you can judge results before investing more.

Q: Is our data safe?

A: We design for data privacy from the start, keep access limited and can use private or self-hosted models where your data is sensitive.

Q: Can you integrate AI into our existing software?

A: Yes. We add AI features to existing products and connect automation to the tools you already use.

Q: How long does an AI automation project take?

A: A focused automation or chatbot can often be piloted within a few weeks. Larger machine learning systems are delivered in stages.

Q: Do you offer ongoing support?

A: Yes. We monitor, retrain and improve the system after launch.

Service: Custom Software Development

Source page: https://hiddenmindsolutions.in/services/software-development

Page title: 'Custom Software Development Company in Udaipur'. Off-the-shelf tools rarely fit how your business really works. We build custom software, from internal tools and ERPs to SaaS products, that matches your process, scales with you and integrates with the systems you already run.

What we build

- Custom business software: ERP, CRM, inventory and operations tools designed around your workflow.
- SaaS product development: from MVP to scale - architecture, billing, multi-tenancy and analytics.
- API & system integration: connect payment gateways, third-party services and legacy systems reliably.
- Legacy modernisation: move ageing systems to modern, maintainable stacks without disrupting operations.
- Cloud & DevOps: CI/CD, cloud deployment and monitoring so releases are safe and repeatable.
- Dedicated development team: hire developers on a full-time or part-time basis to extend your team.

How we work

- 01 Discovery call: we learn your goals, users and constraints, then agree on what success looks like.
- 02 Scope & estimate: a clear scope, timeline and fixed or monthly pricing before any work starts.
- 03 Build in sprints: short sprints with regular demos so you see working software early and can steer it.
- 04 Launch & support: we deploy, monitor and keep improving the product after go-live.

FAQs

Q: What is the difference between custom and off-the-shelf software?

A: Off-the-shelf software is built for the average user. Custom software is built for your exact process, so you do not pay for features you do not need or work around ones you lack.

Q: Can you take over an existing codebase?

A: Yes. We review the code, document the risks and then either stabilise it or modernise it step by step.

Q: What technologies do you use?

A: Mainly React, Next.js, Node.js, Python and cloud platforms, chosen to suit the project rather than by default.

Q: How do you price projects?

A: Fixed-scope pricing for well-defined projects, or a monthly team model for ongoing development. You get a written estimate first.

Q: Can we hire your developers directly?

A: Yes. See the dedicated developer hiring options for full-time and part-time engagements (/HireDev).

Service: Mobile App Development

Source page: https://hiddenmindsolutions.in/services/mobile-app-development

Page title: 'Mobile App Development Company in Udaipur'. We build iOS and Android apps with React Native and Flutter, so you reach both platforms from one codebase without compromising on quality. We handle design, development, store submission and ongoing support.

What we build

- Cross-platform apps: one codebase for iOS and Android with React Native or Flutter.
- MVP for startups: a focused first version to validate your idea with real users quickly.
- Backend & API development: secure APIs, authentication, push notifications and admin dashboards.
- Payments & integrations: wallets, payment gateways, maps, chat and third-party services.
- UI/UX design: clear, accessible interfaces designed for real usage, not just screenshots.
- Store launch & maintenance: App Store and Google Play submission, updates and performance monitoring.

How we work

- 01 Discovery call: we learn your goals, users and constraints, then agree on what success looks like.
- 02 Scope & estimate: a clear scope, timeline and fixed or monthly pricing before any work starts.
- 03 Build in sprints: short sprints with regular demos so you see working software early and can steer it.
- 04 Launch & support: we deploy, monitor and keep improving the product after go-live.

FAQs

Q: Should I build for iOS, Android or both?

A: Most products start cross-platform to reach both audiences at a lower cost. We help you decide based on your users and budget.

Q: React Native or Flutter?

A: Both build high-quality cross-platform apps. We recommend one based on your team, features and long-term plans.

Q: How long does it take to build an app?

A: A focused MVP typically takes a couple of months. Timelines depend on features, integrations and design complexity.

Q: Do you publish the app to the stores?

A: Yes. We handle submission to the App Store and Google Play and guide you through review.

Q: Do you provide support after launch?

A: Yes. We offer maintenance plans for updates, fixes and new features.

Service: n8n Workflow Automation

Source page: https://hiddenmindsolutions.in/services/n8n-automation

Page title: 'n8n Workflow Automation Agency' (meta description: n8n automation agency in India). We design, build and maintain n8n workflows that remove repetitive work from sales, support and operations. From lead routing and follow-ups to AI-powered email and chat assistants, we connect the tools you already use and keep the automations reliable.

What we build

- Lead & CRM automation: capture, enrich, route and follow up on leads across your CRM, forms and messaging channels.
- AI agents in n8n: LLM-powered assistants for support, email triage and internal Q&A, connected to your data.
- Integrations & webhooks: connect APIs, databases, spreadsheets and SaaS tools that have no native integration.
- Self-hosted n8n setup: deployment, security, backups and monitoring for self-hosted n8n instances.
- Workflow audits & fixes: take over, document and stabilise existing workflows that break or run slowly.

Related case studies

- Multilanguage n8n chat support
- Sales automation: SMS sending and reply tracking
- AI Gmail conversation bot

How we work

- 01 Discovery call: we learn your goals, users and constraints, then agree on what success looks like.
- 02 Scope & estimate: a clear scope, timeline and fixed or monthly pricing before any work starts.
- 03 Build in sprints: short sprints with regular demos so you see working software early and can steer it.
- 04 Launch & support: we deploy, monitor and keep improving the product after go-live.

FAQs

Q: What can n8n automate?

A: Almost any repeatable process that moves data between tools: lead handling, notifications, reporting, document processing and AI-assisted replies.

Q: n8n or Zapier?

A: n8n offers more control, complex logic and self-hosting, which often lowers cost at volume. Zapier is simpler for small, quick setups. We recommend based on your use case.

Q: Can you work on our existing n8n workflows?

A: Yes. We review, document and improve existing workflows, then maintain them if you wish.

Q: Do you offer ongoing support?

A: Yes. We monitor workflows, fix failures and add new automations as your needs grow.

Service: GoHighLevel (GHL) Agency and Developers

Source page: https://hiddenmindsolutions.in/services/gohighlevel-agency

We set up and extend GoHighLevel for agencies and businesses: pipelines, funnels, workflows, calendars and messaging, plus custom integrations and AI automation where the standard features stop.

What we build

- Account setup & migration: pipelines, calendars, forms and data moved into GoHighLevel cleanly.
- Workflows & automation: follow-up sequences, reminders and lead routing across SMS, email and WhatsApp.
- Custom integrations: connect GoHighLevel to your ERP, billing, n8n workflows and third-party APIs.
- AI in GoHighLevel: voice and chat assistants that qualify leads and book appointments.
- White-label support for agencies: build and maintain client sub-accounts so your team can focus on selling.

Related case studies

- Project onboarding into GoHighLevel
- Sales automation: SMS sending and reply tracking

How we work

- 01 Discovery call: we learn your goals, users and constraints, then agree on what success looks like.
- 02 Scope & estimate: a clear scope, timeline and fixed or monthly pricing before any work starts.
- 03 Build in sprints: short sprints with regular demos so you see working software early and can steer it.
- 04 Launch & support: we deploy, monitor and keep improving the product after go-live.

FAQs

Q: Can you migrate us from another CRM?

A: Yes. We map your fields, pipelines and history, migrate the data and rebuild your automations in GoHighLevel.

Q: Do you build custom integrations?

A: Yes. We connect GoHighLevel to other systems through its API, webhooks and n8n.

Q: Can you work as a white-label partner?

A: Yes. We support agencies by building and maintaining client accounts under your brand.

Q: How do we get started?

A: Book a free consultation. We review your current setup and goals and send a scoped plan and estimate.

Service: AI Voice and Calling Agent Development

Source page: https://hiddenmindsolutions.in/services/ai-voice-agent

We build AI voice agents that answer and place calls, qualify leads, book appointments and handle common support questions, connected to your CRM and calendar so every call ends in a recorded outcome.

What we build

- Inbound call agents: answer calls around the clock, handle FAQs and route or book callers.
- Outbound calling: follow up on leads and reminders with natural-sounding voice agents.
- CRM & calendar integration: log calls, update records and book meetings automatically.
- Voice and prompt design: scripts, guardrails and fallbacks tuned for your business and language needs.
- Monitoring & improvement: call transcripts, analytics and regular tuning after launch.

Related case study

- AI calling agent with ElevenLabs voice AI

How we work

- 01 Discovery call: we learn your goals, users and constraints, then agree on what success looks like.
- 02 Scope & estimate: a clear scope, timeline and fixed or monthly pricing before any work starts.
- 03 Build in sprints: short sprints with regular demos so you see working software early and can steer it.
- 04 Launch & support: we deploy, monitor and keep improving the product after go-live.

FAQs

Q: Which tools do you use?

A: We build with providers such as ElevenLabs and large language models, chosen to fit your latency, language and budget needs.

Q: Can the agent hand over to a human?

A: Yes. We design clear handover rules so complex or sensitive calls reach your team.

Q: Does it integrate with our CRM?

A: Yes. Calls, transcripts and outcomes are written back to your CRM or spreadsheet.

Q: How long does a pilot take?

A: A focused pilot for one use case can usually be live within a few weeks.

Service: WhatsApp Automation and AI Chatbot Development

Source page: https://hiddenmindsolutions.in/services/whatsapp-automation

We build WhatsApp chatbots and automations that respond to customers instantly, capture and qualify leads, send notifications and hand conversations to your team when needed, connected to your CRM.

What we build

- AI chatbots: answer questions from your own content and guide customers to the right next step.
- Lead capture & qualification: collect details, score leads and push them into your CRM.
- Notifications & reminders: order updates, appointment reminders and follow-ups.
- Human handover: route conversations to your team with full context.
- Multilingual support: serve customers in English, Hindi and other languages.

Related case study

- AI-powered WhatsApp automation (conversational AI)

How we work

- 01 Discovery call: we learn your goals, users and constraints, then agree on what success looks like.
- 02 Scope & estimate: a clear scope, timeline and fixed or monthly pricing before any work starts.
- 03 Build in sprints: short sprints with regular demos so you see working software early and can steer it.
- 04 Launch & support: we deploy, monitor and keep improving the product after go-live.

FAQs

Q: Do I need the WhatsApp Business API?

A: For automation at scale, yes. We help you set it up and stay within WhatsApp policies.

Q: Can the bot use our own documents and FAQs?

A: Yes. We connect the assistant to your content so answers stay accurate and on-brand.

Q: Can it connect to our CRM?

A: Yes. Leads and conversations are synced to your CRM or sheet.

Q: Is it only for customer support?

A: No. Sales follow-up, booking, payments reminders and internal alerts are common uses.

Service: ERPNext Development and Implementation

Source page: https://hiddenmindsolutions.in/services/erpnext-development

We implement and customise ERPNext for growing businesses and institutions: modules configured around your workflow, data migrated from your old systems, and custom apps and integrations where the standard features stop.

What we build

- Implementation & setup: accounting, inventory, sales, purchase, HR and more, configured to your process.
- Custom apps & scripts: custom doctypes, workflows, print formats and reports.
- Data migration: move customers, items, stock and balances from spreadsheets or legacy software.
- Integrations: connect payment gateways, e-commerce, CRM and automation tools.
- Training & support: team training, upgrades and ongoing maintenance.

Related case studies

- ERPNext platform for growing enterprises
- College ERP: institutional management platform

How we work

- 01 Discovery call: we learn your goals, users and constraints, then agree on what success looks like.
- 02 Scope & estimate: a clear scope, timeline and fixed or monthly pricing before any work starts.
- 03 Build in sprints: short sprints with regular demos so you see working software early and can steer it.
- 04 Launch & support: we deploy, monitor and keep improving the product after go-live.

FAQs

Q: Is ERPNext suitable for a small or medium business?

A: Yes. It is open source and modular, so you can start with the modules you need and add more later.

Q: Can you customise it for our process?

A: Yes. We build custom workflows, fields, reports and apps without breaking upgrades.

Q: Can you migrate our existing data?

A: Yes. We clean and import your data from spreadsheets or your current system.

Q: Do you provide support after go-live?

A: Yes. We offer maintenance plans for fixes, upgrades and new requirements.

Hire Developers

Source page: https://hiddenmindsolutions.in/HireDev

Page title: 'Hire a Dedicated Developer (Full time / Part Time)'. 'Connect with skilled developers who can bring your vision to life. From web development to mobile apps, our talent pool has you covered.' Meta description: hire skilled developers for your projects, access top remote talent in React, Node.js, Python, AI/ML and more, with flexible engagement models.

How we work (hiring process)

- 01 Requirement Analysis: share your project requirements, tech stack preferences and team expectations. We analyse your specific needs and goals.
- 02 Choose a Resource: review curated profiles of developers matched to your requirements, with portfolios, technical assessments and previous client reviews.
- 03 Interview Process: run technical and cultural-fit interviews with shortlisted candidates. HMS facilitates the process and provides interview guides.
- 04 Onboarding & Integration: seamless integration with your team. HMS handles contracts and NDA setup and provides tools for collaboration from day one.

Technologies covered

React, NodeJS, MongoDB, Docker (the page says developers are proficient in a wide range of modern technologies and frameworks).

Developer profile shown

- MERN stack Developer - 3+ years experience - MongoDB, Express (React and Node)
- Button: 'Start Hiring'

Contact form

'Let's Connect' form: first name, last name, email, phone number, country code (IN default) and message. Closing banner: 'Hire Expert Developers for Your Next Project'.

About Us, Team and Culture

How we work at HMS (employee benefits and culture)

- Health care: comprehensive health insurance plans for you and your family.
- Team events: regular team-building activities and social events.
- Professional development: access to training programs, workshops and courses.
- Competitive salary: attractive compensation packages.
- Paid time off: generous vacation policy and paid holidays.
- Flexible working hours: work when you are most productive, with remote work options.

Closing banner: 'Have a challenge for us? We love challenges.' with a 'Start a project' button.

Our Work / Portfolio Overview and Testimonials

Source page: https://hiddenmindsolutions.in/work

Heading: 'Our Projects - Over 25+ projects across various industries since 2024.' Meta description: explore our portfolio of successful projects, case studies and client testimonials.

Projects listed on the Work page

- Revolution Realty Capital - Real Estate Finance - Web Application
- FindYourSaaS - SaaS Platform - SaaS Discovery & Comparison Platform
- Nav Pooja Public Secondary School (NPPSS) - Website Design - School Management & Digital Showcase Platform
- Indian Ion Exchange - AI Automation - AI Automation & Intelligent Workflow Platform
- MyPay - Digital Payment Platform - Virtual Wallet & Payment Gateway (Web & Mobile)
- Udaipur Travel Point - Travel Platform - Web Application
- Luxury Tower Virtual Tour - Real Estate Visualization - 3D Visualization experience

More case studies linked from service pages: Multilanguage n8n chat support, Sales automation SMS tracking, AI Gmail conversation bot, Project onboarding into GoHighLevel, AI calling agent with ElevenLabs, AI-powered WhatsApp automation, ERPNext platform for enterprises, and College ERP. All are included in this document.

Our process

- 1 Discovery: we learn about your brand, goals and audience.
- 2 Strategy: we craft a clear, data-driven plan.
- 3 Design: we create user-friendly, stunning visuals.
- 4 Development: we build seamless, high-performance solutions.
- 5 Launch: we launch, optimise and scale for success.

Client testimonials

- Kaushal Shah (5 stars): 'They built our online presence from the ground up, giving AdviClaim Solutions a strong, professional identity.'
- Bhupendra Singh Ranawat (5 stars): 'Built us an easy-to-use app for emergency and heavy vehicles. Havigo is fast, reliable, and has been a great support for our startup.'
- Shiv parashad Sanadhya (5 stars): 'They built our school website and set up a WhatsApp AI chatbot, making communication and information sharing much easier for students and parents.'
- Siva Rajadurai (4 stars): 'HiddenMind Solutions delivered smooth n8n automations and a clean UI. Efficient, professional, highly recommended.'

Clients named in testimonials and projects: AdviClaim Solutions (website), Havigo (app for emergency and heavy vehicles), a school (website and WhatsApp AI chatbot).

FAQs shown on the page

Q: What types of processes can you automate?

A: We specialize in automating repetitive workflows across operations, marketing, sales, and customer support using AI and custom logic.

Other questions listed (answers collapsed on the site and not captured): Do you build custom software or use no-code tools? Can you integrate with our existing systems? How secure are your solutions? Do you develop AI-powered systems?

Case Study: Revolution Realty Capital - Technology-Driven Real Estate Capital Platform

Source page: https://hiddenmindsolutions.in/work/revolution-realty-capital

Sector

FinTech, Real Estate Lending, Private Money Lending

Services provided

- Full Stack Development
- FinTech Platform Development
- UI/UX Design
- Secure API Integration
- Compliance-Ready Architecture

Technology

- Next.js
- Node.js
- PostgreSQL
- AWS
- Stripe API

Overview

Revolution Realty Capital is a U.S.-based private money lending platform designed to deliver fast, reliable and transparent funding for real estate investors. The platform streamlines the whole lending lifecycle - loan applications, underwriting, approvals, funding and investor communication - through a secure digital experience.

Challenge

Traditional private money lending relied on manual processes, fragmented communication and slow approval cycles. Investors faced funding delays and had little visibility into loan status. The client needed a secure, scalable digital platform that speeds up funding decisions while ensuring compliance, data security and a smooth experience for borrowers and internal teams.

Solution

HMS built a private lending platform that digitises the entire loan lifecycle: online loan applications, automated document handling, real-time loan status tracking and secure investor dashboards. It integrates risk assessment workflows, payment processing and compliance-ready data management.

Outcomes

Significantly faster loan processing and better operational efficiency. Investors get instant visibility into funding progress and internal teams use streamlined, centralised workflows. The platform supports scalable growth, improved customer trust and a competitive edge in the U.S. private real estate lending market.

Case Study: FindYourSaaS - Helping Businesses Discover the Right SaaS Faster

Source page: https://hiddenmindsolutions.in/work/findyoursaas

Sector

SaaS, Business Software

Services provided

- UI/UX Design
- Full Stack Development
- CMS Integration
- SaaS Platform Development

Technology

- Next.js
- Node.js
- MongoDB

Overview

FindYourSaaS is a curated SaaS discovery platform that helps businesses find, compare and choose the best software. It organises SaaS products into clear categories, offers feature-based comparisons and highlights relevant tools for startups, enterprises and growing businesses.

Challenge

Businesses struggle to identify the right SaaS tools among thousands of options. A lack of structured comparisons, unbiased recommendations and clear categorisation makes software selection slow and inefficient.

Solution

A centralised platform where businesses explore SaaS products by category, features and use cases. An intuitive UI, structured listings and a comparison-driven approach help users quickly evaluate tools.

Outcomes

Faster decisions and better SaaS adoption. The platform reduces research time, improves software adoption and increases visibility for SaaS providers.

Case Study: Nav Pooja Public Secondary School (NPPSS) - Empowering Education Through Digital Excellence

Source page: https://hiddenmindsolutions.in/work/nppss

Sector

Education, Secondary School, EdTech

Services provided

- Website Design & Development
- UI/UX Design for Educational Platforms
- Responsive Web Development
- Content Structuring & Academic Showcase
- Performance Optimization
- Maintenance & Technical Support

Technology

- HTML5
- CSS3
- JavaScript

Overview

NPPSS is a reputed school known for a disciplined academic culture and a legacy of 100% pass results over multiple years. HMS built a modern, responsive, scalable digital platform that works as a digital showcase and information hub for parents, students and staff.

Challenge

Limited digital visibility and fragmented information. No central platform for academic and institutional information; hard for parents and students to get timely updates; limited online visibility of achievements; manual communication causing delays; non-responsive experience across devices.

Solution

A centralised, responsive school website with mobile-friendly UI/UX, structured academic content for easy navigation, sections for announcements, admissions and results, and ease of future content updates.

Outcomes

Better access to school information for parents and students, stronger digital presence and credibility, less manual communication, a consistent experience on all devices, and long-term maintainability with minimal admin effort.

Case Study: Indian Ion Exchange - Agentic AI Automation to Streamline Industrial Operations

Source page: https://hiddenmindsolutions.in/work/indian-ion-exchange-ai-automation

Sector

Industrial Automation, Water & Wastewater Treatment

Services provided

- AI Automation Solutions
- Business Process Automation
- Intelligent Workflow Design
- Digital Transformation

Technology

- Agentic AI
- AI Automation
- Workflow Orchestration
- OpenAI
- API Integrations

Overview

Indian Ion Exchange partnered with HMS to modernise and automate internal operations using Agentic AI-powered workflows. As its industrial water and wastewater treatment projects grew, teams were burdened by repetitive tasks such as quotation preparation, documentation, workflow coordination and client communication.

Challenge

Manual, fragmented and time-consuming workflows for quotations, documentation, task coordination and client communication. Slow turnaround, repetitive work and limited visibility across departments, with a risk of delays, errors and inconsistent communication.

Solution

Agentic AI automation workflows tailored to the company's operations. They automate quotation generation, documentation, task routing, approvals and client communication with minimal human involvement, can reason and act autonomously, and integrate with existing internal tools.

Outcomes

Reduced manual effort and delays. Quotation preparation time dropped from hours to under 30 minutes and response times became near real-time. Teams gained full workflow visibility, fewer errors, and more time for high-value work, enabling the company to scale efficiently.

Case Study: MyPay - Secure Virtual Wallet & Digital Payment Gateway Platform

Source page: https://hiddenmindsolutions.in/work/my-pay-virtual-wallet-and-payment-gateway

Sector

FinTech, Digital Payments, Financial Services

Services provided

- Full Stack Development
- Payment Gateway Integration
- Wallet & Transaction System
- Secure API Development
- UI/UX Design

Technology

- React.js
- Node.js
- Express.js
- MongoDB
- REST APIs
- AWS

Overview

MyPay is a secure, scalable virtual wallet and digital payment gateway platform built for real-time transactions, wallet top-ups, merchant settlements and API-based integrations. It lets individuals and businesses make seamless digital payments with high security, compliance and reliability.

Challenge

Managing digital payments at scale needs secure transaction processing, real-time payment validation, user trust and reliability. MyPay needed a unified fintech platform that handles high transaction volumes, multiple payment flows and sensitive financial data across devices.

Solution

A full-stack digital payments platform with a secure backend and intuitive UI, including wallet management, transaction processing, payment gateway integrations and real-time status tracking, plus scalable APIs and security practices that meet financial standards.

Outcomes

Launched as a secure, scalable payments solution with faster transactions, high uptime and a better user experience. It enabled rapid user adoption, higher transaction success rates and a base for future growth.

Case Study: Udaipur Travel Point - Travel Booking & Tour Management Platform

Source page: https://hiddenmindsolutions.in/work/udaipur-travel-point

Sector

Travel & Tourism

Services provided

- Full Stack Development
- Travel Booking Platform
- UI/UX Design
- API Integration

Technology

- Next.js
- Node.js
- MongoDB
- React Native

Overview

Udaipur Travel Point (UTP) is a travel booking and tour management platform that promotes tourism across Udaipur and Rajasthan. Travelers can explore curated tour packages, book local sightseeing and plan personalised trips, with destination information, package listings and direct booking options.

Challenge

Fragmented travel information (travelers relied on many websites and offline sources), limited digital visibility for local tour operators, guides and hospitality providers, and outdated, non-responsive travel platforms.

Solution

A centralised platform showing attractions, accommodation, packages and cultural experiences in one interface; a mobile-first, intuitive UI/UX; local vendor integration so operators can showcase services; and smart categorisation, visual galleries and clear calls to action.

Outcomes

Better travel planning from a single platform, greater reach and inquiries for local businesses, stronger brand positioning as a trusted destination guide, and a future-ready base for online bookings, multilingual support and seasonal campaigns.

Case Study: Luxury Tower Virtual Tour - Immersive 3D Virtual Tour for a Luxury Residential Tower

Source page: https://hiddenmindsolutions.in/work/luxury-tower-virtual-tour-3d-real-estate-tour

Sector

Real estate developers, property agencies, real estate marketing agencies

Services provided

- 3D Virtual Tour Production
- Real Estate Visualization
- Web-Based 3D Deployment
- Performance-Optimized Assets
- Real-Time Rendering & Interactivity

Technology

- 3D Modelling & Texturing
- Real-Time Rendering (Unity / Unreal Engine)
- WebGL
- Camera navigation

Overview

A high-end 3D visualisation and interactive virtual experience that showcases a modern luxury residential tower and its urban surroundings before construction begins. It replaces 2D floor plans, static images and physical site visits with an interactive walkthrough. It features detailed 3D exterior modelling, realistic urban context, amenities such as sports courts, swimming pools and gardens, and real-time lighting and sky simulation. It runs in the browser via WebGL with no app needed, suitable for investor demos, buyer presentations and pre-sales.

Challenge

Traditional real estate presentations rely on 2D plans, static images, brochures and site visits, which cannot convey scale, surroundings or lifestyle, and site visits are impractical before construction. Investors and buyers struggle to connect with early-stage projects.

Solution

A fully interactive 3D luxury tower experience with accurate proportions, realistic surroundings, full amenity modelling, day-and-night lighting and free camera navigation, delivered as a WebGL web tour with no installation, optimised for smooth performance and reusable for demos and proposals.

Outcomes

A high-impact virtual experience that lets users visualise the tower before construction, better than brochures and 2D plans, helping speed up buyer interest, supporting faster and more confident decisions, and reducing reliance on physical site visits.

Case Study: Multilingual AI Chat Support Across WhatsApp & Telegram (Multilanguage n8n Chat Support Workflow)

Source page: https://hiddenmindsolutions.in/work/multilanguage-n8n-chat-support

Sector

AI Automation, Customer Support, Conversational Interfaces

Services provided

- Multilingual Chatbot Development
- Automated Workflow Design
- Cross-Platform Messaging Integration
- Natural Language Processing
- Real-Time Translation

Technology

- n8n
- OpenAI API
- Translation APIs
- WhatsApp API
- Telegram Bot API
- Webhook Automation

Overview

A multilingual AI chat support system built with n8n, OpenAI and translation APIs that gives smart, seamless conversational support across WhatsApp and Telegram. It interprets messages, translates content and responds with contextual accuracy in real time.

Challenge

Supporting customers across languages and messaging platforms is resource-intensive, slow and inconsistent without automation.

Solution

An n8n-based automated workflow that uses translation tools and OpenAI to understand user messages and deliver relevant responses across WhatsApp and Telegram.

Outcomes

Faster support, better customer satisfaction, reduced support load and a flexible system able to handle multilingual queries. Results claimed: 24/7 support with zero downtime, real-time language detection and translation, and reduced manual support workload.

Case Study: Automated SMS Lead Nurturing with Real-Time Reply Tracking (Sales Automation Workflow)

Source page: https://hiddenmindsolutions.in/work/sales-automation-sms-sending-and-reply-tracking-workflow

Sector

SaaS companies, B2B/B2C sales teams, digital agencies, growth-marketing teams

Services provided

- Sales Automation & Lead Nurturing
- CRM Integration & Syncing
- Two-Way SMS Tracking
- Workflow Orchestration & Scalability
- Reporting & Analytics Enablement

Technology

- n8n
- Pipedrive
- Notion API
- Docker on AWS
- Octopush API (SMS)

Overview

An intelligent sales-automation workflow built for a sales-driven SaaS company. Pipedrive webhooks detect new leads, personalised SMS messages are sent via the Octopush API and delivery status is recorded back in the CRM. Incoming SMS replies are captured via Octopush webhooks, matched to Pipedrive contacts and deals by phone number, and logged in a Notion database for interaction history and audit trail. The pipeline runs in n8n with retry logic, opt-in compliance and real-time updates.

Challenge

Fragmented lead communication slowed sales and hurt conversion. Manual SMS dispatch caused delays and errors, replies were scattered across personal phones, there was no centralised SMS logging, and data was siloed between Pipedrive and reporting tools. Response rates were under 20%.

Solution

An event-driven n8n workflow: a Pipedrive webhook triggers an outbound SMS engine via Octopush, replies are captured, matched to Pipedrive contacts and logged in Notion. HMS reports 98% SMS open rates and replies handled in under 90 seconds with zero manual effort.

Outcomes

Lead response rate rose from 18% to 45% (+150%). Sales cycle time was cut from 14 days to 7 days. Manual effort per lead batch dropped from 4 hours to fully automated (about 90% time saving). SMS interactions became centralised and auditable. Direct pipeline lift of +$25K in monthly revenue.

Case Study: Secure AI-Powered Gmail Conversation Automation in GoHighLevel (AI Gmail Conversation Bot)

Source page: https://hiddenmindsolutions.in/work/ai-gmail-conversation-bot-gmail-automation

Sector

Service-based businesses, water & wastewater treatment, agencies, sales teams

Services provided

- AI Email Automation
- RAG-Based Knowledge Retrieval
- SOP-Aligned Response Engine
- Real-Time Workflow Automation
- CRM Integration & Orchestration

Technology

- n8n (workflow automation)
- GoHighLevel (CRM)
- OpenAI (AI model)
- RAG architecture with a vector database
- Webhooks and REST APIs
- JavaScript

Overview

An automation system that handles email conversations inside GoHighLevel. It captures incoming emails via webhooks, passes them through an AI-powered RAG architecture that retrieves information from internal SOPs and knowledge bases stored in a vector database, and generates context-aware replies aligned with business processes using OpenAI chat models, then sends them back to GoHighLevel in near real time with minimal human intervention.

Challenge

High email volumes cause manual handling of repetitive queries, delayed responses, inconsistent replies because knowledge is not standardised, difficulty scaling support and difficulty applying SOPs in daily communication.

Solution

Webhook-based email capture from GoHighLevel, Retrieval-Augmented Generation over vector databases and SOPs, an OpenAI response engine that produces accurate, context-aware replies, formatting, and sending back to GoHighLevel via webhook. It also manages full conversation threads automatically.

Outcomes

Less manual workload, much faster response times, consistent SOP-aligned communication, higher efficiency under volume, and a scalable support setup that grows without extra staff.

Case Study: Secure ERP & Project Management Workflow Automation in GoHighLevel (Project Onboarding)

Source page: https://hiddenmindsolutions.in/work/project-onboarding-into-gohighlevel-ghl-erp

Sector

SaaS companies, project-based firms, consulting studios, project management

Services provided

- Business Process Automation
- CRM Workflow Automation
- AI-Powered Task Generation
- Email & Notification Automation
- Scalable Integration Architecture

Technology

- n8n workflow automation
- JavaScript
- REST APIs
- Email automation
- OpenAI

Overview

An intelligent workflow automation solution that streamlines onboarding and management of projects within GoHighLevel, treated as an ERP-style platform combining contacts, projects, tasks and communications. Webhook triggers capture incoming project data in real time and automatically create or update contacts, opportunities, projects and tasks. An OpenAI layer generates structured project tasks which are assigned to team members with status tracking and due dates. Email notifications are sent for status changes, stage updates and deadlines.

Challenge

Manual creation of contacts, opportunities and tasks in CRM; inconsistent task definition and assignment; no real-time progress visibility; delays onboarding new projects; poor communication and coordination among stakeholders.

Solution

Webhook-based data capture, contact and opportunity automation, AI task generation with OpenAI, task processing and assignment, status updates and email notifications, and progress tracking via webhooks.

Outcomes

Faster project onboarding, significantly less manual effort, more accurate and consistent task creation, better stakeholder communication and transparency, and a centralised project management system.

Case Study: AI Calling Agent using ElevenLabs Voice AI

Source page: https://hiddenmindsolutions.in/work/ai-calling-agent-eleven-labs-voice-ai

Sector

Artificial Intelligence, Voice AI, Automation

Services provided

- AI Agent Development
- Voice AI Integration
- Conversational Flow Design
- API Integration
- Deployment & Optimization

Technology

- ElevenLabs Voice AI
- Node.js
- WebSockets
- REST APIs
- Cloud Infrastructure

Overview

An advanced voice-based conversational system built with ElevenLabs speech synthesis and conversational AI. It automates outbound and inbound calls with natural, human-like conversations for lead qualification, appointment scheduling, customer support and follow-ups, understanding intent and responding in context.

Challenge

Businesses relied on manual calling teams and basic IVR systems that lacked natural conversation, struggled with caller intent and dynamic responses, and could not scale. Call quality was inconsistent, costs were high and engagement was low.

Solution

An AI Calling Agent powered by ElevenLabs Voice AI for real-time, natural, context-aware phone conversations, with automated call flows for lead qualification, appointment scheduling, follow-ups and support, that is scalable and reliable.

Outcomes

Over 86% call intent classification accuracy, faster response times, less manual calling effort, better engagement, 24/7 availability and the ability to handle high call volumes with consistent human-like interactions.

Case Study: Intelligent 24/7 WhatsApp Customer Support via AI-Driven Conversations (AI-Powered WhatsApp Automation)

Source page: https://hiddenmindsolutions.in/work/ai-powered-whatsApp-automation-conversational-ai

Sector

B2B services, SaaS companies, digital-first businesses, B2C services, e-commerce, ed tech

Services provided

- Conversational AI Setup
- Multimodal Message Handling
- Knowledge-Based AI Agent
- Auto-Reply & Escalation Logic
- 24/7 WhatsApp Support Layer

Technology

- WhatsApp Business API
- OpenAI GPT-4o (text understanding and response)
- OpenAI Whisper (voice transcription)
- OpenAI Vision API (image content extraction)
- OpenAI Embeddings
- MongoDB Atlas with vector search
- Workflow orchestration

Overview

A conversational AI pipeline that turns WhatsApp into an always-on support channel for a B2B and B2C services company. It receives text, voice notes, images and documents via the WhatsApp Business API and routes each to the right AI path. Voice is transcribed with Whisper, images are understood with the Vision API, documents (PDF/DOCX) are parsed to text, and everything goes to a GPT-4o knowledge-base agent that uses embeddings and MongoDB Atlas vector search to give knowledge-grounded answers. Replies go back on WhatsApp in under 10 seconds, conversation history is kept for multi-turn context, and complex or sensitive cases are escalated to humans.

Challenge

High WhatsApp volume needed full-time agents; support was limited to business hours, raising churn risk; messages arrived in many formats with no unified process; answer quality varied by agent; knowledge was siloed in documents and spreadsheets; scaling meant hiring more agents at unsustainable cost.

Solution

A four-phase closed-loop pipeline: (1) message intake and routing by type with graceful fallback for unsupported formats; (2) multi-format AI processing (Whisper, Vision, document parsing); (3) knowledge base agent with GPT-4o and vector search; (4) automated WhatsApp response and escalation with stored history.

Outcomes

About 95%+ faster responses (minutes down to under 10 seconds), 70-80% lower agent workload, 4x more message types supported (text, voice, images, documents), 24/7/365 coverage, nearly 100% consistent knowledge-based answers, and scaling to hundreds of simultaneous conversations without added headcount.

Case Study: End-to-End ERP Platform Based on ERPNext (Platform for Growing Enterprises)

Source page: https://hiddenmindsolutions.in/work/erpnext-erp-platform-for-enterprises

Sector

SMBs, manufacturing, services, SaaS-based firms

Services provided

- Custom ERP Module Development
- Data Migration & Multi-Company
- Process Automation for Finance, Inventory, Manufacturing and HR
- Real-Time Reporting & BI Integration
- Institutional Dashboards

Technology

- Frappe Framework v16
- MariaDB
- Nginx + Gunicorn
- Frappe UI
- Docker
- REST APIs

Overview

ERPNext is an open-source ERP built on the Frappe framework (Python) with MariaDB. It integrates finance and accounting, supply chain, HR, CRM, projects, manufacturing, asset management, e-commerce and domain verticals (healthcare, education, agriculture, non-profits) into one system, replacing disconnected spreadsheets and legacy tools. It supports real-time reporting, multi-company and multi-currency operations and cloud-ready deployment, with a DocType-based architecture for fast customisation. The page states that Frappe v16 and ERPNext v16 improve performance up to about 2x and reduce CPU/RAM use by about 30%. Industry-wide deployments are quoted at 40-60% higher inventory accuracy, 50-70% faster month-end closes, 70-80% less manual data entry, and 80-90% licence-cost savings versus SAP/Oracle.

Challenge

Before ERP, organisations run on siloed systems, Excel sheets and paper, with no single source of truth, slow error-prone manual workflows, no real-time visibility, high licence costs and vendor lock-in with traditional ERPs, multi-currency and multi-company complexity, weak role-based access and compliance risk, and slow, costly customisation.

Solution

ERPNext as a unified cloud-native platform connecting finance, inventory, sales, procurement, CRM, HR, projects and manufacturing in one real-time system of record. It automates purchase orders, approvals, invoicing, payroll and leave management, offers open-source flexibility with low licensing overhead, role-based access, audit trails and real-time dashboards.

Outcomes

Faster order-to-cash and procure-to-pay cycles, shorter month-end close, better inventory accuracy, fewer manual errors, real-time visibility, stronger compliance, and ability to scale across locations and business units without proportional admin overhead.

Case Study: College ERP - Comprehensive Institutional Management Platform

Source page: https://hiddenmindsolutions.in/work/college-ERP-institutional-management-platform

Sector

Ed Tech, Higher Education, Corporate Training, Multi-Program Campuses

Services provided

- Custom ERP Development
- Fee & Payment Automation
- Student Lifecycle Management
- Workflow Digitization
- Scalable Integration
- Institutional Dashboards

Technology

- Workflow automation
- Node.js
- React.js
- MySQL
- UPI Banking
- Python
- AWS

Overview

A scalable web-based platform to digitise and automate academic, financial, administrative and operational workflows for higher education institutions (BBA, BCA, MBA, B.Com, M.Com programmes). It centralises the student lifecycle from profiles and program allocation to document storage and real-time fee tracking. Core modules: Program Management (semester setup, student mapping), Fee Category Management (tuition and exam fees, scholarships, waivers with audit trails), Student Fee Management (auto-assignment, installments, outstanding balances) and Fee Payment (UPI, cards, cash with PDF/email receipts). It has role-based access, real-time reporting and 99.5% uptime. Claimed results: 30% admin workload reduction, 60% faster insights and 90%+ digital adoption. Scalable for future modules such as HR, hostel and library.

Challenge

Centralise academic and student lifecycle data; automate fee structure assignment and payment tracking; improve operational transparency; reduce administrative workload and human errors; enable department-wise performance monitoring; provide real-time reports for management; build a scalable system for future modules.

Solution

A modular ERP platform with integrated workflows across departments: Program Management, Student Management, Fee Category Management, Student Fee Management and Fee Payment modules. Delivered through phased implementation from analysis to training.

Outcomes

Full digital workflow adoption across academic, financial and administrative departments; significantly less manual admin effort through automated workflows and approvals; near-zero downtime; automated reports giving real-time visibility to management.

Careers

Source page: https://hiddenmindsolutions.in/career

Heading: 'Join Our Team of Innovators'. 'At HMS, we're more than just a company - we're a community of driven, creative, and ambitious individuals from around the world. We believe in the power of diverse perspectives and are committed to fostering an environment where everyone can thrive and reach their full potential.'

Why work with us

- Dynamic Culture: a team that moves fast, collaborates openly and celebrates new ideas, with people from different backgrounds.
- Innovation First: work with modern tools, explore new approaches and shape products that make a real impact.
- Growth & Learning: mentorship, feedback, learning resources and stretch projects.
- Impact That Matters: contribute to meaningful projects and see the results of your efforts.

Open positions

- MERN Stack Developer - Udaipur - Full-Time - On-site (/career/mern-stack-developer)

Filters on the page: department, work model, location, type.

Job Opening: MERN Stack Developer

Source page: https://hiddenmindsolutions.in/career/mern-stack-developer

- Title: MERN Stack Developer
- Type: Full-Time, 35+ hours per week
- Work model: On-site
- Location: Udaipur

Job description

We are seeking a highly skilled Full-Stack Developer for an on-site role in Udaipur. The ideal candidate builds scalable, high-performance web applications using modern TypeScript-based architecture. You will collaborate closely with product, design and backend teams to deliver enterprise-grade digital solutions with clean, maintainable, production-ready code.

More roles coming soon: additional opportunities in AI-powered transcription and quality assurance roles.

Application form

Fields: resume upload, first name, last name, email, phone number, country, primary language spoken (English or Hindi), additional languages, experience level (beginner, intermediate, expert), cover letter, availability (start immediately or within 1 week), and agreement to the Terms & Conditions and Privacy Policy.

Blog: Unlocking Long-Horizon Code with Xiaomi's MiMo Code: A Deep Dive into Next-Gen AI Agents

Source page: https://hiddenmindsolutions.in/blog/xiaomi-mimo-code-ai-agent-long-horizon-programming

Author: Tushar Vaghela, CTO. Published: June 14, 2026. Reading time: 10 min. Category: Technology. (Condensed summary of the article.)

- MiMo Code is an open-source, agentic AI coding harness from Xiaomi that runs in the developer's terminal and can carry out a full cycle of design, planning, coding, testing and review from a high-level goal.
- Its main innovation is a multi-layered, persistent memory system (project memory in a MEMORY.md file, session checkpoints, scratch notes and per-task progress logs, powered by SQLite FTS5 full-text search) that lets the agent keep context across hundreds of steps and across sessions.
- A parallel 'checkpoint-writer' subagent updates memory and creates checkpoints while the main agent works. A /dream command compresses and deduplicates past sessions, and a 'distill' function turns repeated workflows into automation.
- Other features: a Compose mode for goal-driven development, voice control, zero-config default channel, and support for Xiaomi's MiMo-V2.5 models plus third-party and OpenAI-compatible backends.
- Use cases: automated feature development, refactoring and code migration, long-running bug fixes, prototyping, and learning complex codebases.
- The article argues that scaffolding and harness engineering around a model matters as much as raw model capability, and that developers will shift toward orchestrating and reviewing agents.

Blog: The Unseen Hurdle: Why Autonomous AI Agents Struggle with Databases

Source page: https://hiddenmindsolutions.in/blog/autonomous-ai-agents-database-challenges-optimization-future

Author: Tushar Vaghela, CTO. Published: June 7, 2026. Reading time: 7 min. Category: Technology. (Condensed summary of the article.)

- Autonomous AI agents struggle when they touch databases, because database work demands precision, correctness and performance, and errors can cause failures, data corruption or slowdowns.
- Promising areas include 'tuning agents' that automate database optimisation (parameters, indexes, query strategies) and 'coding agents' that generate standard components such as B+ trees or buffer managers.
- The hardest unsolved problem is the query optimizer, which is tied to specific database architectures and has few generic references; proving AI-generated optimisation rules are correct and beneficial is difficult.
- Use cases: autonomous detection and fixing of load spikes, automated provisioning, scaling and schema migrations, and data pipeline optimisation.
- Developers must design agent-friendly database interactions, set guardrails, and watch for 'AI slop' (highly specialised code that breaks easily). The likely future is humans and AI working together toward 'autonomous databases'.

Blog: The Rise of Lightweight AI Agents: Unlocking Autonomous Workflows with Nanobot

Source page: https://hiddenmindsolutions.in/blog/lightweight-ai-agents-autonomous-workflows-nanobot

Author: Tushar Vaghela, CTO. Published: May 31, 2026. Reading time: 10 min. Category: Technology. (Condensed summary of the article.)

- Nanobot is an open-source, ultra-lightweight AI agent with a minimal, readable core agent loop that pulls memory and skills in as context only when needed ('contextual pull').
- It supports sustained, multi-turn goals; works with many LLM providers (OpenAI, Anthropic, DeepSeek, AWS Bedrock, Hugging Face) and channels (Telegram, Discord, Slack, WeChat, WhatsApp, Feishu).
- Features include a web UI, end-to-end image generation, streaming reasoning, automatic fallback models, and a memory system that learns and can discover skills.
- Use cases: coding assistance, personal knowledge assistant, workflow orchestration, 24/7 market analysis, daily routine management, first-line customer support triage, and education.
- Benefits for developers: low barrier to entry, rapid prototyping, easy customisation, and a clear codebase for learning agent design.

Blog: The Double-Edged Sword: Navigating AI Agents, Data Security, and the Future of Software Engineering

Source page: https://hiddenmindsolutions.in/blog/ai-agents-data-security-future-software-engineering

Author: Tushar Vaghela, CTO. Published: May 24, 2026. Reading time: 8 min. Category: Technology. (Condensed summary of the article.)

- Autonomous AI agents speed up software development but are risky because they often hold valid credentials; a bug, misconfiguration or compromise could delete production data or backups.
- Agents work in a loop of perceiving, reasoning, planning and acting, using LLMs, tools and APIs, and can generate code, deploy applications and manage infrastructure.
- Use cases: automated refactoring, proactive security patching, infrastructure management, enhanced testing and data pipeline management, each carrying risk if not controlled.
- Recommendations: an 'agent-aware' security mindset, granular access controls for AI entities, monitoring and rollback, explainability and audit trails, and resilient system design.
- Future: more automated software lifecycles, new AI-specific vulnerabilities, governance needs, and new data protection approaches such as immutability and isolated recovery layers.

Blog: The Rise of Ultra-Lightweight AI Agents: Powering Personal Automation and Innovation

Source page: https://hiddenmindsolutions.in/blog/ultra-lightweight-ai-agents-personal-automation-innovation

Author: Tushar Vaghela, CTO. Published: May 17, 2026. Reading time: 7 min. Category: Technology. (Condensed summary of the article.)

- Ultra-lightweight AI agents are compact, efficient agents with a minimal core loop that run on local machines or cloud, keep sustained objectives, and connect to many chat channels and tools.
- Key traits: modular architecture, efficient memory management, multi-channel integration, dynamic tool and skill discovery, streaming reasoning, and flexible deployment (local, AWS Bedrock, Hugging Face, NVIDIA NIM).
- Use cases: personal productivity assistants, daily routine management, personal knowledge assistants, software engineering support, market analysis, and customer support.
- They lower the barrier to AI development, encourage experimentation and open-source contribution, and are a good platform for learning agentic AI.
- Future directions: self-improvement, stronger multi-step planning, more modalities, decentralised networks of agents, and ethical governance.

Blog: The Rise of Self-Improving AI Agents: A New Era in Autonomous Software Development

Source page: https://hiddenmindsolutions.in/blog/self-improving-ai-agents-autonomous-software-development-era

Author: Tushar Vaghela, CTO. Published: May 10, 2026. Reading time: 8 min. Category: Technology. (Condensed summary of the article.)

- Self-improving agents have a built-in learning loop: they log actions and outcomes, spot successful patterns and turn them into reusable skills, and keep knowledge across sessions.
- They use memory such as full-text search across past sessions with LLM summarisation, and 'dialectic user modeling' to learn user preferences.
- Features: support for many LLM providers, multi-platform use (Telegram, Discord, Slack, CLI), natural-language cron schedulers, isolated subagents for parallel work, and varied terminal backends (local, Docker, SSH, Modal, Daytona).
- Use cases: code review, bug fixing, documentation, DevOps and incident response, research, content creation and customer service.
- Developers shift from direct coding to 'agent orchestration' as 'factory architects'; ethical and governance considerations become more important.

Blog: Unleashing AI Innovation: The Rise of Containerless Development and AI Agent Orchestration

Source page: https://hiddenmindsolutions.in/blog/unleashing-ai-innovation-containerless-development-agent-orchestration

Author: Tushar Vaghela, CTO. Published: May 3, 2026. Reading time: 8 min. Category: Technology. (Condensed summary of the article.)

- New open-source tools let developers run AI workloads on serverless GPU infrastructure without Docker containers, removing the 'packaging tax' and reducing cold starts.
- A cross-platform build engine bundles code and dependencies into an artifact that is mounted at runtime on the GPU fleet; configuration is declared in code with decorators such as @Endpoint.
- Other features: low-latency networking and storage, persistent network volumes for datasets and model weights, and 'polyglot' pipelines that send preprocessing to cheaper CPUs and inference to GPUs.
- It also offers a substrate that lets AI agents and coding assistants discover and orchestrate remote hardware by themselves.
- Use cases: faster research iteration, model training and fine-tuning, real-time inference APIs, autonomous agents; future direction is an AI-first cloud with more abstraction.

Blog: DeepSeek V4: The Open-Weight AI Model Challenging Frontier LLMs with Unmatched Efficiency

Source page: https://hiddenmindsolutions.in/blog/deepseek-v4-open-weight-ai-model-challenging-frontier-llms-efficiency

Author: Tushar Vaghela, CTO. Published: April 26, 2026. Reading time: 7 min. Category: Technology. (Condensed summary of the article.)

- DeepSeek V4 is a new open-weight LLM family from the Chinese lab DeepSeek, with V4 Flash and V4 Pro variants, using a Mixture-of-Experts architecture.
- It supports a context window of up to 1 million tokens. V4 Pro has 1.6 trillion total parameters with 49 billion active per task.
- DeepSeek claims V4-Pro-Max beats some closed models on certain reasoning tasks, and matches GPT-5.4 on coding competition benchmarks. It is priced well below many frontier models.
- Use cases: reviewing and refactoring large codebases, summarising books and long reports, customer support agents, research, and affordable AI for startups.
- Open weights let developers fine-tune and self-host. The article expects open and frontier models to converge and notes MoE is a trend toward more efficient AI.

Blog: Unleashing the Power of Personal AI Agents: A Deep Dive into Nanobot

Source page: https://hiddenmindsolutions.in/blog/nanobot-ultra-lightweight-personal-ai-agent-deep-dive

Author: Tushar Vaghela, CTO. Published: April 19, 2026. Reading time: 8 min. Category: Technology. (Condensed summary of the article.)

- Nanobot is an open-source, ultra-lightweight personal AI agent built for stable, long-running tasks, with minimal footprint and fast startup.
- Architecture: a layered memory system (an append-only summarised history file plus a long-term knowledge base managed by a 'Dream' component that consolidates learning and promotes repeated workflows into skills), providers (OpenAI, Anthropic, Groq, vLLM) and channels (Telegram, Discord, WhatsApp, WeChat, email, CLI).
- It includes sandboxing for shell commands and file operations and context compaction to cut token costs.
- Use cases: market analysis, software engineering assistant, daily routine management, personal knowledge assistant, content generation and customer support.
- Impact: faster agent development, custom skills, AI research platform, secure AI apps and an open-source ecosystem.

Blog: Navigating the Deluge: The Urgent Challenge of AI-Generated Code in Open Source and Enterprise

Source page: https://hiddenmindsolutions.in/blog/navigating-ai-generated-code-challenge-open-source-enterprise

Author: Tushar Vaghela, CTO. Published: April 12, 2026. Reading time: 6 min. Category: Technology. (Condensed summary of the article.)

- AI coding agents generate code and pull requests far faster than humans can validate them, creating a 'throughput asymmetry' that is already overwhelming open-source maintainers and may hit enterprises next.
- Risks: lower code quality, technical debt, security vulnerabilities, reviewer burnout and 'comprehension debt' as developers understand less of their own codebase.
- Recommended responses: isolated, production-like environments to test AI changes before a PR is opened, judging changes by behavioural evidence rather than line-by-line review, tagging AI-authored code and tracking defect rates, and keeping human accountability.
- Conclusion: the industry must close the gap between generation speed and validation with shift-left testing and stronger validation infrastructure.

Blog: The Rise of Autonomous AI Agents: Transforming Software Development and Beyond

Source page: https://hiddenmindsolutions.in/blog/autonomous-ai-agents-transforming-software-development-innovation

Author: Tushar Vaghela, CTO. Published: April 5, 2026. Reading time: 10 min. Category: Technology. (Condensed summary of the article.)

- Autonomous AI agents combine reasoning-first LLMs, multi-step planning, tool use and memory to tackle long-horizon tasks.
- Key advances: reasoning architectures with a 'thinking' phase, Mixture-of-Experts efficiency, open-source momentum (permissive licences), synthetic-data training and Spec-Driven Development (SDD).
- Use cases: autonomous software development, enterprise automation, research and data analysis, content and multimedia generation, and interactive assistants.
- Developers become 'AI orchestrators' or 'spec-first engineers'; open models give transparency and reduce vendor lock-in.
- Future: AI-native development, hyper-personalisation, accelerated research, automated large-scale problem solving, and a need for ethics and governance.

Blog: Revolutionizing Development: The Rise of AI-Driven Self-Service Platforms

Source page: https://hiddenmindsolutions.in/blog/ai-driven-self-service-developer-platforms-revolution

Author: Tushar Vaghela, CTO. Published: March 30, 2026. Reading time: 8 min. Category: Technology. (Condensed summary of the article.)

- AI-driven self-service developer platforms are the next generation of Internal Developer Platforms (IDPs), built on Kubernetes and enhanced with AI to automate and personalise developer workflows.
- They give a public-cloud-like experience on-premises, with automated provisioning (often triggered by a git push), intelligent observability, AI code assistants, adaptive resource management and AI-assisted security.
- Use cases: standardising practices in large enterprises, financial institutions, e-commerce traffic peaks, SaaS scaling, scientific computing and healthcare.
- For developers: less waiting and friction, more autonomy, less cognitive load. Future: predictive provisioning, MLOps integration, self-healing and unified DevSecOps.

Blog: Unleashing AI's Potential: A Deep Dive into Spec-Driven Development and Executable Specifications

Source page: https://hiddenmindsolutions.in/blog/ai-spec-driven-development-executable-specifications-future-software

Author: Tushar Vaghela, CTO. Published: March 15, 2026. Reading time: 8 min. Category: Technology. (Condensed summary of the article.)

- Spec-Driven Development (SDD) makes specifications executable artifacts that AI agents turn into code, instead of documents that are interpreted and then discarded.
- Workflow: (1) establish project principles or 'constitution'; (2) write specifications of what and why; (3) clarify and refine ambiguities; (4) technical planning (stack and architecture); (5) task breakdown; (6) AI-driven implementation.
- Benefits: higher consistency and quality, fewer misinterpretations, faster delivery, and an alternative to 'vibe coding'. It is technology-independent.
- Use cases: enterprise compliance, startup prototyping, custom applications and legacy modernisation.
- Developers focus on architecture, specification engineering, validation and innovation.

Blog: The Autonomous Revolution: How AI Agents Are Redefining Software Development and Discovery

Source page:
https://hiddenmindsolutions.in/blog/autonomous-revolution-ai-agents-redefining-software-development-discovery

Author: Tushar Vaghela, CTO. Published: March 12, 2026. Reading time: 8 min. Category: Technology. (Condensed summary of the article.)

- AI agents are autonomous programs that perceive, decide and act, powered by LLMs, planning modules and tools, and are becoming part of software development, research and operations.
- Open-source agent platforms are democratising access; agents can run autonomous research and experiments, and often run in isolated Docker containers for security.
- Use cases: code generation, bug fixing, code review, security analysis, self-healing IT infrastructure, cybersecurity and data pipelines.
- Developers become orchestrators and designers of agent systems, needing skills in prompting, governance and security.
- The article stresses ethical, regulatory and security challenges as agents enter critical infrastructure.

Privacy Policy

Source page: https://hiddenmindsolutions.in/PrivacyPolicy

Last updated: August 1, 2025. Company: Hidden Mind Solutions ('we', 'us', 'our'). The policy explains how HMS collects, uses, discloses and safeguards information when you visit the website, use services or engage with HMS. By using the website or services you consent to these practices.

2. Information we collect

- Contact information: full name, email, phone, company name, job title, business address.
- Professional information: industry, project requirements and specifications, budget, technical requirements.
- Account information: username and password (if you create an account), preferences, communication preferences.
- Payment information: billing address, payment method details (processed securely through payment gateways), tax identification numbers, purchase history.
- Technical information collected automatically: IP address, browser type and version, operating system, device information, time zone, approximate location, referring website, pages visited and time spent, clickstream data.
- Communication data: emails, chat messages, feedback and survey responses, support tickets, meeting notes and recordings (with consent).
- Project-related data when providing services: business data and documents, source code and technical specifications, database information, analytics and performance data, user behaviour and usage patterns.
- Cookies, web beacons and similar technologies: to remember preferences, analyse traffic, improve experience, track marketing campaigns and personalise content.

3. How we use information

- Service delivery: process requests, provide support, deliver projects, manage accounts, process payments.
- Communication: respond to inquiries, send project updates, provide documentation, share service information, send newsletters (with consent).
- Business operations: improve services and website, research and analysis, develop new products, ensure security and prevent fraud, comply with law.
- Marketing (with consent): promotional materials, industry insights, market research, personalised marketing.
- Legal and compliance: enforce terms, protect rights and property, respond to legal processes, prevent illegal activities.

4. Legal basis (GDPR)

For EU users, processing is based on consent, contract, legal obligation or legitimate interests.

5. Sharing and disclosure

HMS may share information with service providers and partners (cloud hosting, payment processors, email providers, analytics platforms, marketing automation tools, subcontractors and consultants), in business transfers such as mergers, where required by law, or with your consent (for example testimonials and case studies with approval). HMS does not sell personal information, does not share data for third-party marketing without consent, and does not use data for purposes unrelated to its services.

6. Data security

Measures include encryption in transit (SSL/TLS), encryption of sensitive data at rest, secure authentication and access controls, regular security audits, intrusion detection and prevention, secure coding practices and employee security training. Users should keep credentials confidential, use strong passwords, report suspicious activity and keep contact information updated. No method of transmission or storage is 100% secure.

7. Data retention

- Active clients: duration of engagement plus 3-7 years for legal and tax purposes
- Prospective clients: up to 3 years from last contact
- Marketing data: until you unsubscribe or request deletion
- Project data: as specified in service agreements (typically 1-5 years)
- Data is securely deleted or anonymised when no longer needed; some may be kept for legal compliance; backups are purged periodically.

8. Your privacy rights

Access and portability, correction, deletion ('right to be forgotten', subject to legal retention), restriction and objection (including opting out of marketing), withdrawal of consent, and the right to lodge complaints with data protection authorities. To exercise rights, contact info@hiddenmindsolutions.in; HMS responds within 30 days.

9. Cookies

Types: essential (core functionality, login, security), performance (traffic analysis, page load times), functionality (preferences, personalisation) and marketing (campaign tracking, targeted ads). Cookies can be controlled via browser settings, consent banners and privacy tools, but blocking may affect functionality. Third parties that may set cookies include Google Analytics, social media platforms, advertising networks and CRM platforms.

10-12. Third-party links, international transfers, children

HMS is not responsible for the privacy practices of linked third-party sites. Data may be transferred to and processed in India (primary operations) and countries where providers operate, using safeguards such as Standard Contractual Clauses. Services are not directed to people under 18 and HMS does not knowingly collect children's data.

13. California rights (CCPA)

California residents have the right to know what is collected and whether it is sold or disclosed, to delete, to opt out of sale (HMS does not sell personal information) and to non-discrimination. Shine the Light requests are also supported.

14. Data processing for clients

HMS acts as data controller for its own business operations and as data processor when processing client data on their instructions, and enters Data Processing Agreements covering scope, security, subprocessors, breach notification and compliance.

15-20. Changes, contact, compliance, automated decisions, marketing, Indian users

- Policy changes: significant changes are communicated by email or website notice; continued use means acceptance.

- Contact: Hidden Mind Solutions, Sikar, Rajasthan, India; https://hiddenmindsolutions.in/; info@hiddenmindsolutions.in; response within 30 days.
- Compliance: Indian IT (Reasonable Security Practices and Procedures and Sensitive Personal Data or Information) Rules 2011, GDPR for EU clients, CCPA for California clients, and other applicable laws.
- Automated decision-making: none that significantly affects you without human intervention, except with explicit consent, for contract performance or where authorised by law.
- Marketing: opt-in only; unsubscribe via email link, by contacting HMS or account preferences; transactional emails (invoices, project updates) are not subject to opt-out.
- Indian users: sensitive personal data is handled with additional security and explicit consent; complaints can go to the Grievance Officer with response within 30 days.

Terms of Use (Terms & Conditions)

Source page: https://hiddenmindsolutions.in/TermsOfUse

Last updated: August 1, 2025. These Terms are a legally binding agreement between Hidden Mind Solutions and the client, governing access to the website, products and services. Submitting an inquiry, signing a Statement of Work or engaging the services means you accept the Terms.

2. Definitions

- Services: all IT services including software, web and mobile development, AI solutions, cloud computing, digital marketing, SEO, UI/UX design, IT consulting and related services.
- Deliverables: work products, materials, documentation, code, designs and outputs created by HMS.
- Statement of Work (SOW): document outlining requirements, scope, deliverables, timelines and payment terms.
- Confidential Information and Intellectual Property: as customarily defined (business plans, technical data, source code, trade secrets; patents, copyrights, trademarks and other IP).

3. Service offerings

- Software development: custom enterprise software, web and mobile applications, API development, database design, legacy modernisation.
- AI and machine learning: model development, natural language processing, computer vision, predictive analytics, chatbot development.
- Cloud services: cloud migration, AWS, Azure, Google Cloud, DevOps and CI/CD, cloud security.
- Digital marketing: SEO, social media marketing, content marketing, PPC advertising.
- Design services: UI/UX design, graphic design, brand identity, prototyping.

3.3 Client responsibilities

Provide accurate, complete and timely information and necessary access, designate a primary contact, join scheduled meetings, respond to inquiries within 2-3 business days, review and approve deliverables within agreed periods, pay on schedule with valid billing information, and notify billing disputes within 10 days.

4. Payment terms

- Fee structures: fixed price, time and materials, retainer, or milestone-based.
- Standard payment terms: 30-40% advance on project start, 30-40% on milestones, remaining balance on final delivery.
- Payment methods: bank transfer (NEFT, RTGS, IMPS), wire transfer for international clients, online gateways (Razorpay, PayPal, Stripe).
- Taxes: prices exclude GST unless stated; 18% GST is added for Indian clients; international clients are responsible for applicable taxes.
- Late payments: interest of 1.5% per month on overdue amounts; HMS may suspend services for payments overdue by 15+ days.

5. Intellectual property

Upon full payment the client owns custom code, custom designs and visual assets, and documentation specific to deliverables. HMS retains proprietary methodologies and processes, pre-existing IP, tools and frameworks,

reusable code components, and trade secrets and know-how. Open-source components stay under their own licences; commercial third-party components need separate licences obtained by the client. HMS may include project details in its portfolio and use the client's name in client lists; the client may request confidential treatment.

6. Confidentiality

Both parties keep confidential information confidential, use it only for authorised purposes, limit disclosure to those who need to know, and return or destroy it on request. Exceptions: public information, previously known, independently developed, or legally required disclosure. Obligations last three years from disclosure and indefinitely for trade secrets.

7. Timeline and delivery

Timelines are good-faith estimates subject to the client meeting obligations, with regular progress updates. Milestones: requirements gathering, design and architecture, development, testing and QA, deployment and go-live. Acceptance testing review period is 5-10 business days with written feedback; deliverables are deemed accepted if there is no response in that period. Force majeure delays are excused.

8. Warranties

HMS warrants professional performance, conformity to specifications, no third-party IP infringement and authority to grant licences. A warranty period of 30-90 days covers bug fixes for defects present at delivery and corrections for non-conformance at no extra charge. Exclusions: client modifications or misuse, third-party software issues, client environment issues, and damage from viruses or unauthorised access. Otherwise services are provided 'AS IS'.

9. Limitation of liability

Total liability is capped at fees paid for the specific project in the 12 months before the claim. HMS is not liable for indirect, incidental or consequential damages, lost profits, lost data, business interruption or reputational damage. Exceptions: client payment obligations, IP infringement indemnification, gross negligence or wilful misconduct, fraud, and death or injury from negligence.

10. Indemnification

The client indemnifies HMS for the client's use or misuse of deliverables, client-provided content, claims by the client's customers or third parties, client breach of agreement or law, and illegal use of deliverables. HMS indemnifies the client for claims that its deliverables infringe third-party IP, subject to prompt notice and cooperation, with HMS controlling the defence.

11. Term and termination

The client may terminate for convenience with 30 days notice; payment is due for completed work and termination fees of 10-25% may apply. Termination for cause: uncured material breach within 15 days, insolvency, illegal activities, or failure to pay within 30 days of the due date. On termination outstanding fees are due, confidential information is returned, paid completed work is delivered, and licences are revoked on non-payment.

12-13. Dispute resolution and governing law

Disputes start with written notice and 30 days of good-faith negotiation, then mediation (costs shared equally, location Sikar, Rajasthan), then litigation with exclusive jurisdiction of the courts of Sikar, Rajasthan, India, where the prevailing party may recover attorneys' fees. Governing law is Indian law including the Information Technology Act 2000, Indian Contract Act 1872 and Copyright Act 1957.

Contact

Hidden Mind Solutions, Sikar, Rajasthan, India. Website https://hiddenmindsolutions.in/. Email info@hiddenmindsolutions.in.

Consolidated Quick-Answer FAQ for the Chatbot

Short answers pulled from the content above, written to be easy for a chatbot to match against visitor questions.

Q: Where is Hidden Mind Solutions located?

A: The headquarters is at Office Number 1, near Eklingnath Boys Hostel Road, Manwakheda, Udaipur, Rajasthan 313003, India. The legal documents list Sikar, Rajasthan as the company address and jurisdiction.

Q: How can I contact Hidden Mind Solutions?

A: Email info@hiddenmindsolutions.in or call or WhatsApp +91 9376778747, Monday to Friday, 8am to 5pm. You can also use the contact form on the website for a free consultation.

Q: What does Hidden Mind Solutions do?

A: It is an AI and software development company offering web development, AI and automation, custom software, mobile apps, n8n automation, GoHighLevel setup, AI voice agents, WhatsApp automation and ERPNext development.

Q: Who founded the company and who is on the leadership team?

A: Himanshu Sanadhya is Founder and CEO, and Tushar Vaghela is Co-Founder and CTO.

Q: How much do projects cost?

A: No prices are published. After a short discovery call the team sends a written estimate, either fixed price or monthly, before work begins.

Q: How does the working process go?

A: Discovery call, scope and estimate, build in sprints with regular demos, then launch and support.

Q: Do I own the source code?

A: Yes. For web development, the site states that you own the code and content built for you. The Terms say ownership of custom code and designs passes to the client on full payment.

Q: What payment terms apply?

A: Typically 30-40% advance, 30-40% at milestones and the balance on final delivery. GST of 18% is added for Indian clients. Late payments carry 1.5% monthly interest.

Q: What technologies does the company use?

A: React, Next.js, Node.js, Express, Python, FastAPI, .NET, React Native, Flutter, MongoDB, PostgreSQL, MySQL, AWS, Docker, n8n, make.com, Zapier, GoHighLevel, OpenAI, ElevenLabs, Vapi and more.

Q: Can I hire developers from HMS?

A: Yes, full-time or part-time dedicated developers (for example MERN stack developers with 3+ years experience) through the Hire Developer page.

Q: Are there job openings?

A: Yes. A MERN Stack Developer role in Udaipur, full-time and on-site. More roles are said to be coming in AI-powered transcription and quality assurance.

Q: Does HMS build mobile apps?

A: Yes, iOS and Android apps with React Native and Flutter, including store submission and maintenance.

Q: Does HMS build WhatsApp chatbots and AI voice agents?

A: Yes. WhatsApp automation and AI chatbots, and AI voice and calling agents (for example using ElevenLabs), connected to CRM and calendar.

Q: Does HMS work with international clients?

A: Yes. It works with clients across India and worldwide using remote calls and regular demos. Past work includes a U.S.-based lending platform.

Q: Can I see examples of past work?

A: Yes. Case studies include Revolution Realty Capital, FindYourSaaS, NPPSS school website, Indian Ion Exchange, MyPay, Udaipur Travel Point, a Luxury Tower 3D virtual tour, n8n chat support, SMS sales automation, an AI Gmail bot, GoHighLevel onboarding, an AI calling agent, WhatsApp AI automation, ERPNext and College ERP.

Q: Is there a company brochure?

A: Yes, it can be downloaded from https://hiddenmindsolutions.in/downloads/HMS-Company-Brochure.pdf
